

Portauswahl GridVis Dienst unter Windows 10

Achtung: Ab Windows 10 ist es nicht mehr möglich den GridVis Dienst unter dem Port 80 laufen zu lassen. Dieser wird von einem Windows Prozess "ntoskml.exe" verwendet.

The screenshot displays a Windows 10 desktop environment. On the left, a Command Prompt window titled "Eingabeaufforderung" shows the output of the command `netstat -ao`. The output lists active network connections with columns for Protocol, Local Address, Remote Address, Status, and PID. A red box highlights the first few lines of the output, showing connections to 0.0.0.0:80. On the right, the Task Manager window is open, showing the "Prozesse" (Processes) tab. A red box highlights the "Systemsteuerung und komprimierter Speicher" (System Control and Compressed Memory) process, which is identified as "ntoskml.exe". A red arrow points from the "ntoskml.exe" process in Task Manager to the "netstat -ao" output in the Command Prompt. Below the Task Manager window, a small window titled "Eigenschaften von ntoskml.exe" (Properties of ntoskml.exe) is open, showing the "Allgemein" (General) tab. This window displays the file name "ntoskml.exe", the file type "Anwendung (.exe)", the description "NT Kernel & System", and the location "C:\Windows\System32".

Um zu überprüfen ob der Port bereits verwendet wird, muss man folgenden Befehl in der Eingabeaufforderung (cmd) ausführen: **netstat -ao**
